

## MEMBER FUNCTIONS OF THE VECTOR CLASS

constructors	Create vectors
operator=	Copy the contents of a vector
operator[]	Return the element of a vector at a specified location
assign	Assign elements to a vector
at	Return the element of a vector at a specified location
back	Access the last element of a vector
begin	Return the iterator pointing to the beginning of a vector
capacity	Return the number of elements that a vector can hold
clear	Erase all elements of a vector
empty	Test whether a vector is empty
end	Return the iterator pointing to the end of a vector
erase	Erase elements of a vector
front	Access the first element of a vector
insert	Insert elements into a vector
max_size	Return the largest possible size of a vector
pop_back	Remove the last element of a vector
push_back	Insert an element at the end of a vector
rbegin	Return the reverse_iterator pointing to the beginning of a reversed vector
rend	Return the reverse_iterator pointing to the end a reversed vector
reserve	Request a change in capacity of a vector
resize	Change the size of a vector
size	Return the size of a vector
swap	Swap the contents of two vectors

## FUNCTIONS PROTOTYPES

constructors	Create vectors
	<code>vector ()</code> – create an empty vector
	<code>vector (size_type n, const T&amp; value =T())</code> – create a vector from the <code>n</code> copies of <code>value</code>
	<code>template &lt;class II&gt; vector (II first, II last)</code> – create a vector from a copy of the elements starting from the element referred by the input iterator <code>first</code> to the element right before the one referred by the input iterator <code>last</code>
	<code>vector (const vector&lt;T&gt;&amp; v)</code> – create a copy of the vector <code>v</code>
destructor	Destroy a vector
	<code>~vector ()</code> – deallocate all the storage capacity allocated by a vector
operator=	Copy the contents of a vector
	<code>vector&lt;T&gt; operator= (const vector&lt;T&gt;&amp; v)</code> – assign a copy of the vector <code>v</code> to a vector
operator[]	Return the element of a vector at a specified location
	<code>T&amp; operator[] (size_type pos)</code> – return a reference to the element at position <code>pos</code> in a vector
	<code>const T&amp; operator[] (size_type pos) const</code> – const version of the operator
assign	Assign elements to a vector
	<code>void assign (size_type n, const T&amp; x)</code> – assign <code>n</code> copies of the element <code>x</code> to a vector, replacing its current content
	<code>template &lt;class II&gt; void assign (II first, II last)</code> – assign a copy of the elements, starting from the element referred by the input iterator <code>first</code> to the element right before the element referred by the input iterator <code>last</code> , to a vector, replacing its current content
at	Return the element of a vector at a specified location
	<code>T&amp; at (size_type pos)</code> – return a reference to the element at position <code>pos</code> of a vector and also perform a range check
	<code>const T&amp; at (size_type pos) const</code> – const version of the function
back	Access the last element of a vector
	<code>T&amp; back ()</code> – return a reference to the last element of a vector
	<code>const T&amp; back () const</code> – const version of the function
begin	Return the iterator pointing to the beginning of a vector
	<code>iterator begin ()</code> – return an iterator to the first element of a vector
	<code>const_iterator begin () const</code> – const version of the iterator
capacity	Return the number of elements that a vector can hold
	<code>size_type capacity () const</code> – return the size of the allocated storage space for a vector
clear	Erase all elements of a vector
	<code>void clear ()</code> – set a vector content to an empty vector
empty	Test whether a vector is empty
	<code>bool empty () const</code> – return whether a vector is empty
end	Return the iterator pointing to the end of a vector
	<code>iterator end ()</code> – return an iterator referring to the end of a vector
	<code>const_iterator end () const</code> – const version of the iterator
erase	Erase elements of a vector
	<code>iterator erase (iterator i)</code> – erase the element of a vector at position referred by the iterator <code>i</code>
	<code>iterator erase (iterator first, iterator last)</code> – erase all the elements of a vector between

	the positions referred by the iterators <code>first</code> and <code>last</code>
<code>front</code>	Access the first element of a vector
	<code>T&amp; front ()</code> – return a reference to the first element of a vector
	<code>const T&amp; front () const</code> – const version of the function
<code>insert</code>	Insert elements into a vector
	<code>iterator insert (iterator i, const T&amp; x)</code> – insert a copy of the element <code>x</code> at the position referred by the iterator <code>i</code> into a vector and return an iterator referring to the insert position
	<code>void insert (iterator i, size_type n, const T&amp; x)</code> – insert <code>n</code> copies of the element <code>x</code> at the position referred by the iterator <code>i</code> into a vector
	<code>template &lt;class It&gt; void insert (iterator i, It first, It last)</code> – insert a copy of the elements, starting from the element referred by the input iterator <code>first</code> to the element right before the one referred by the input iterator <code>last</code> , at the position referred by the iterator <code>i</code> into a vector
<code>max_size</code>	Return the largest possible size of a vector
	<code>size_type max_size () const</code> – return the maximum number of elements that a vector can hold
<code>pop_back</code>	Remove the last element of a vector
	<code>void pop_back ()</code> – remove the last element of a vector
<code>push_back</code>	Insert an element at the end of a vector
	<code>void push_back (const T&amp; x)</code> – add a new element at the end of a vector
<code>rbegin</code>	Return the reverse_iterator pointing to the beginning of a reversed vector
	<code>reverse_iterator rbegin ()</code> – return a reverse iterator referring to the last element of a vector
	<code>const_reverse_iterator rbegin () const</code> – const version of the reverse iterator
<code>rend</code>	Return the reverse_iterator pointing to the end a reversed vector
	<code>reverse_iterator rend ()</code> – return a reverse iterator referring to the element right before the first element of a vector
	<code>const_reverse_iterator rend () const</code> – const version of the reverse iterator
<code>reserve</code>	Request a change in capacity of a vector
	<code>void reserve (size_type n)</code> – request that the capacity of the allocated storage space for a vector be at least <code>n</code>
<code>resize</code>	Change the size of a vector
	<code>void resize (size_type n, T x = T())</code> – resize the vector content to <code>n</code> elements, and if <code>n</code> is greater than the current size of the vector, its content is expanded by filling of the copies of the element <code>x</code>
<code>size</code>	Return the size of a vector
	<code>size_type size () const</code> – return the number of elements in a vector
<code>swap</code>	Swap the contents of two vectors
	<code>void swap (vector&lt;T&gt;&amp; v)</code> – swap the contents of a vector with the vector <code>v</code>
